

Emily Anderson
Horizon 6th grade

I feel gifted learning should be more introduced to our school. Here there is an Accelerated Math class, but not much for other subjects. Our school should help enhance the learning opportunities. What gifted education means to me is that you are getting what you need. Most kids are very smart, but will not have the same opportunities that others do.

My life without gifted education is very different. You just sit and listen to something you already know. Gifted education would benefit our school for the better, and help with social skills. Studies show that schools with gifted programs have higher academic success. *lse.ed.gov* states that gifted education students develop a higher sense of respect and gratitude for life.

A gifted education teacher may benefit my life by using real-life experiences within the learning. It would also give someone to connect with as a trusting adult. With this education, my life would be different by having a higher knowledge and learning above and beyond. "Gifted students tend to achieve academically at a higher level and, feel better when compared to non-identified peers," says *EducatoinCorner.com*.

According to *nagc.org* 63% of gifted children reported to have advanced terminal degrees. While 44% held doctorate degrees. Teachers say they like gifted education, because it gives the kids an opportunity to thrive in learning. Many of our worlds leaders were in gifted education scenarios.

In conclusion participating in gifted education may help future careers, by using social learning skills to help with real-world problems. Gifted education is a great thing for kids my age, because it will add to their future. It will also maybe inspire them to learn more about different kinds of topics. I feel gifted education is very important in our world.
